

# How to use Amazon Web Services for training deep CNN?

msaqib	Aug 11	
Do we need to install all the libraries and packages on the instance of AWS or can we use the pre-configured pyimagesearch guru environment there??		
Adrian Chief PyImageSearcher	Aug 11	
If you want to use AWS for training your own CNNs, you'll need to follow the Deep Learning install instructions detailed inside the Deep Learning module. The PyImageSearch Gurus VM cannot be directly used inside the AWS cloud.		Aug 11

Thanks for your reply. Once, i install all the packages on amazon instance, will it stay there? or can we use any other community provide AMIs for course?		
Adrian Chief PyImageSearcher	Aug 15	
Once you've installed all the packages on your own Amazon instance, it will stay on your account. Just be sure to shut down the machine once you're finished using it for the day so you don't get charged. When you want to work with the machine again, just boot it up and SSH into it 😊		
As for other community AMIs, since I do not know how they were setup, I cannot guarantee they will work out-of-the-box for the course.		4 / 4 Aug 16
